

EZ-Quant (Ver 1.1.1) Statistical Analysis Software Installation Instructions

This product has been developed and tested by the Defense Contract Audit Agency (DCAA) for use in its audit processes. It is freeware and its use and copying is unrestricted. While DCAA has made every effort to identify and repair all deficiencies in this product, DCAA does not guarantee that this product is free from defects that might interfere with its operation on the downloader's system. This product is made available "as is", and the use of the software is done at the downloader's own risk. DCAA makes no warranties, expressed or implied, concerning this product.

System Requirements:

| | Minimum Tested | Recommended |
|--|--------------------------|-----------------------|
| Hardware Requirements: | | |
| Processor | Pentium 75 | Pentium 166 or Higher |
| RAM | 16 MB | 48 MB or Higher |
| Screen Resolution | 640 x 480* | 800 x 600 |
| Hard Disk Space: Many of the files required by EZ-Quant are likely already on your machine. However, the recommended column represents the potential maximum disk space required. | 12 MB (incl. Help files) | 16 MB |

* It is recommended that the target PCs be configured, at a minimum, for a resolution of 800 x 600. While the software will operate at lower resolutions, the user may not be able to see the entire input/output area without scrolling. Further, use of the Help System becomes cumbersome at lower resolutions due to the excessive scrolling required.

Software Requirements:

EZ-Quant was developed for and tested on the Windows XP operating system. Experience has revealed no functional difficulties with its use on the Windows 2000 operating system, but this is only an observation and not an implied promise of full compatibility with Windows 2000.

EZ-Quant also has the capability to send reports directly to Microsoft Excel and read directly from Microsoft Excel worksheets (during statistical sample selection). This functionality was developed and tested with Excel 2003, and its availability is contingent on the presence of Excel 2003 on the target system.

Also, for the HTML help system to operate properly, Microsoft Internet Explorer 4.0 or higher must be installed on the target system.

Installation:

Prior versions of EZ-Quant for Windows (1.0.1 or 1.0.2), if present on the target system, should first be uninstalled (sequence: Settings / Control Panel / Add or Remove Programs). If these prior versions were installed by a user with administrative rights, the same rights will be required for their removal.

Administrative rights are not required for installation.

The installation package is the single installation executable file “EZ-Quant_1.1.1_setup.exe” contained in the zipped download file. Once downloaded and extracted to a folder of the user’s choosing (including removable media), it can be accessed with Windows Explorer. Double clicking on the file’s name/icon will initiate installation.

Destination Directory Information:

During the installation process, you will need to provide the software with a target drive and directory to which it should be installed. EZ-Quant should be installed as stand-alone software on each PC (i.e. do not install EZ-Quant to a LAN drive). The setup procedure will automatically “recommend” installing the software to:

C:\Program Files\DCAA Applications\EZ-Quant

If C: drive is the location of your Program Files folder, simply click the next button to accept the target folder. If your Program Files folder exists on another drive (e.g., D:) then simply click the Browse button and replace the C: of the target folder with D:. Leave the remaining folder information as recommended.

Desktop Shortcuts:

The setup will place shortcuts on the desktop for the three EZ-Quant modules: (1) Statistical Sampling, (2) Regression, and (3) Improvement Curves.

Once installed, the software may be run either by (1) double-clicking one of the EZ-Quant short-cut names/icons on the desktop, or (2) clicking through the sequence: Start / Programs / DCAA Applications / EZ-Quant.
